

An inductive reasoning test measures abilities that are important in solving problems. They may also be referred to as abstract reasoning tests or diagrammatic style tests. These tests measure the ability to work flexibly with unfamiliar information and find solutions. People who perform well on these tests tend to have a greater capacity to think conceptually as well as analytically.

In each example given below, you will find a logical sequence of five boxes. Your task is to decide which of the boxes completes this sequence. To give your answer, select one of the boxes marked A to E.
